FACILITATOR PACK · NOT FOR THE COHORT

Run of show

Saturday 22 August 2026 · 10:00 – 13:00 · CHIPS · 21 Roodehek Street, Gardens · 8 of 8 — seven in the room, Liezl remote

TIME		WHAT
10:00	12′	**Setup and triage** Logged in, everything working. Problems solved now, not at 11:30.
10:12	13′	**Name the job** Eight jobs on the board. That list is the spine of the session.
10:25	12′	**Briefing, not prompting** Rewrite your worst prompt as a proper brief. Watch what changes.
10:37	30′	**Build the business brain** A real Project — your documents, your numbers, your standards.
11:07	15′	**Break** The café is downstairs.
11:22	30′	**Point it at real data** Connect your email, drive or accounts. Ask about your own numbers.
11:52	43′	**Delegate the job** Hand over the job you named. Get back something real.
12:35	15′	**Make it repeat** Turn what worked into a skill. Put it on a schedule.
12:50	10′	**Commit and close** One thing you'll do by Friday. We book the 14-day call here.

WHERE YOUR ATTENTION GOES

The room filled, so block 3 is cut to 12 minutes and block 7 takes the eight — 43 minutes across seven, which is the same six minutes a head you had at six people. Everything between the two shifts eight minutes earlier, including the break. Don't try to see everyone. Kowie first — nothing of his works until the retailer files parse. Then Philipa, who arrives with a job she named herself the night before and no prior version of it to fall back on; read her sentence before she starts. Then Tertius, who has two jobs and only one is an afternoon. Then one check on Carla. Danielle, Reni and Maxime run unaided; put Reni's finished link on the projector.

BEFORE SATURDAY

- **Phone Liezl.** Ten minutes. What's the new model, who's the new audience

- **Chase Kowie's retailer files.** Last week's exports, all four, untidied. Highest-value email you send this week
- Confirm Danielle is on Xero — if not, her connector is Drive
- Confirm Reni can hand over her price list and brochure
- Amended pre-work out: skill install, Google or Microsoft, bring your brand, bring the messy file
- Check where scheduled tasks live in your build, and set one up yourself

The room

Three camps and two outliers. Danielle and Kowie turn data into decisions — sit them together and let the overlap land when the jobs go on the board. Reni and Carla turn a request into a response. Maxime's data only exists because she types it. Tertius has a translation problem, which is literally block 3. Philipa has three businesses under one roof and names her job the night before.

Danielle — d distillery, Founder

A connected model that forecasts demand by brand and SKU, works backwards to what needs ordering and when, and feeds a rolling cash-flow forecast. Before committing to a large production run I want to model the full opportunity — costs, price, margin, payment terms, funding, interest, sell-through — change assumptions and immediately see what I need to charge and how fast I need to sell it.

Build: Your project profitability model

Needs: Your real cost lines for one product — inputs, production, packaging; What you actually sell it for, by channel; Payment terms both ways, and what borrowing costs you; One production run you're weighing up right now

Watch: Don't try to build all five models today. Five inputs you can change beats fifty you can't remember.

Kowie Lotter — Creative Beverages, GM

A lot of data from Checkers, PnP, Makro and Tops — stock on hand and sales-out at store level, weekly. I want it turned into usable information: stores out of stock, top performing stores, slow selling stores.

Build: Your weekly retailer read

Needs: The Tops export, if it comes — everything else is in, thank you; Which Site Article Statuses count as active, and which are noise; Whether Happy Days, Suncove, Malachite and Distillery Road are still live — they're in PnP's data but not on the August price list; What 'slow' means in your business — a number, not a feeling

Watch: Every file has a trap. Checkers repeats each article once per pack size, so totals come out 3 to 5 times too big. PnP's Days Cover reads zero for stores that are fully stocked but not selling. Makro's blanks mean 'not listed', not 'none left'. We fix those first, then build. One account properly beats four half-done.

Reni le Roux — The Almond Girl, Founder

Replying to website requests about becoming a stockist, sending the price list and brochure, and replying to Meta ads where a customer wants to know about a specific product.

Build: A stockist page, and the reply that sends it

Needs: Your current price list and brochure; Your stockist terms — minimums, margins, lead times; Two or three enquiries you've answered well, so it sounds like you; A few of the 'when is it back in stock' emails, and roughly when your next batches are due; Your logo and a couple of product photos

Watch: You'll finish before the rest of the room, so we have a second build ready: an availability page for customers. Your plug-in tells people when something is back; it can't tell them WHEN it will be back, which is what they keep emailing to ask. Publish the date and most of those emails stop being sent at all.

Carla le Roux — Modern Muse, Founder

Difficult to say — I'd like to set up automatic bookings and invoicing for my new coaching website.

Build: Your site, live — taking bookings

Needs: The sessions you sell, what each one costs, and how long they run; Who they are for, in a sentence you would say out loud; An invoice you've sent recently — the real one, so we match your format; Your banking details as they appear on invoices; Your logo and a photo of you. People book a person, not a service

Watch: Two things we are not doing on the day: card payments on the site, and your own domain. Both are sign-ups and money rather than builds, and both will eat the whole afternoon if we let them. You leave with a live web address and invoices going out by EFT — which is how most coaches get paid anyway.

Maxime Davenport — Self employed, Project manager · creative producer · marketing manager

Tracking and logging data manually.

Build: A log that fills itself in

Needs: The thing you're currently logging by hand — the actual file, however rough; What you do with it once it's logged: invoice, report, status update?; Who sees the output, and how often they need it

Watch: Your brief is six words, so we'll spend the first two minutes narrowing it. Bring the file and it narrows itself.

Tertius — Awakening Journeys (Pty) Ltd, Co-founder

Understanding and interpreting my co-founder's ideas and proposals to Claude. Re-prompting and editing until it feels like both of us are understood and the output is useful. A bigger need — we are not even at the implementation stage of integrating our invoicing and accounting (QuickBooks).

Build: Stop being the translator

Needs: Two or three of your co-founder's proposals or ideas, in their own words; The version you ended up with after re-prompting and editing; What Claude keeps getting wrong about your business; An invoice you've sent recently, and how it gets into QuickBooks today

Watch: Two jobs here and only one is an afternoon. The QuickBooks integration is a real project, and you said yourselves you're not at that stage yet. What we can do today is remove the retyping around invoices — and fix the translating, which costs you more hours a week than you think.

Phillippa Schmulian — The Magickal Gem, Owner

You came in on the last seat and there was no form to fill in — which is fine, and possibly better. Everyone else's job was decided a week ago off two lines. Yours gets named properly, by you, with Claude asking the questions. Page 6 is where you do that. Do it tonight, not on Saturday morning.

Build: Name it, then build it

Needs: Do the four questions on page 6 before Saturday — that is the whole of your homework and it takes about fifteen minutes; Whatever Claude tells you it needs, on your laptop as actual files — an order export, a product list, a booking diary, last month's numbers. Not described. The file; Three or four things you have

written yourself — a product description, a newsletter, a workshop write-up. This is what makes anything it drafts sound like you and not like a wellness brochure; Your logo and a few product photos

Watch: Three businesses, one owner, and the temptation will be to fix all three before lunch. Pick one. The other two keep. And be careful of the honest answer to question 2 — across the shop, the readings and the workshops, the thing that doesn't scale is you: your voice, your hands, your diary. The jobs worth handing over are the ones that sound like you without needing you. That's a narrower list than it first looks, and it is the right list.

Danielle and Maxime use Claude daily; everyone else is weekly. Cutting block 3 to 12 minutes is the cost of a full room and it is the wrong block to lose — five of seven are weekly users and Tertius's named job *is* the briefing problem. So don't teach it: run it live off one of his co-founder's proposals, if he said yes. Twelve minutes of a real example beats twenty of a lesson.
