

Run of show

Saturday 22 August 2026 · 10:00 – 13:00 · Ideas Cartel, Claremont · 6 of 8 seats

TIME		WHAT
10:00	12'	Setup and triage Logged in, everything working. Problems solved now, not at 11:30.
10:12	13'	Name the job Four jobs on the board. That list is the spine of the session.
10:25	20'	Briefing, not prompting Rewrite your worst prompt as a proper brief. Watch what changes.
10:45	30'	Build the business brain A real Project — your documents, your numbers, your standards.
11:15	15'	Break The café is downstairs.
11:30	30'	Point it at real data Connect your email, drive or accounts. Ask about your own numbers.
12:00	35'	Delegate the job Hand over the job you named. Get back something real.
12:35	15'	Make it repeat Turn what worked into a skill. Put it on a schedule.
12:50	10'	Commit and close One thing you'll do by Friday. We book the 14-day call here.

WHERE YOUR ATTENTION GOES

Block 7 is 35 minutes across six people. Don't try to see everyone. Kowie first — nothing of his works until the retailer files parse. Then Liezl, who needs her brief held. Then one check on Carla. Danielle, Reni and Maxime can run unaided; put Reni's finished link on the projector.

BEFORE SATURDAY

- **Phone Liezl.** Ten minutes. What's the new model, who's the new audience
- **Chase Kowie's retailer files.** Last week's exports, all four, untidied. Highest-value email you send this week
- Confirm Danielle is on Xero — if not, her connector is Drive
- Confirm Reni can hand over her price list and brochure
- Amended pre-work out: skill install, Google or Microsoft, bring your brand, bring the messy file

- Check where scheduled tasks live in your build, and set one up yourself

The room

Three camps. Danielle and Kowie turn data into decisions. Reni and Carla turn a request into a response. Maxime's data only exists because she types it. Sit Danielle and Kowie together, and let the overlap land when the jobs go on the board.

Danielle — d distillery, Founder

A connected model that forecasts demand by brand and SKU, works backwards to what needs ordering and when, and feeds a rolling cash-flow forecast. Before committing to a large production run I want to model the full opportunity — costs, price, margin, payment terms, funding, interest, sell-through — change assumptions and immediately see what I need to charge and how fast I need to sell it.

Build: Your project profitability model

Needs: Your real cost lines for one product — inputs, production, packaging; What you actually sell it for, by channel; Payment terms both ways, and what borrowing costs you; One production run you're weighing up right now

Watch: Don't try to build all five models today. Five inputs you can change beats fifty you can't remember.

Kowie Lotter — Creative Beverages, GM

A lot of data from Checkers, PnP, Makro and Tops — stock on hand and sales-out at store level, weekly. I want it turned into usable information: stores out of stock, top performing stores, slow selling stores.

Build: Your weekly retailer read

Needs: The Checkers and Tops exports — untidied, as they arrive (PnP and Makro already sent, thank you); Anything that maps your products to each retailer's name for them — a price list, a listing sheet, an old spreadsheet; Which Site Article Statuses count as active, and which are noise; What 'slow' means in your business — a number, not a feeling

Watch: Both files have a trap in them. PnP's Days Cover reads zero for stores that are fully stocked but not selling, so the obvious sort is 82% wrong. Makro's blanks mean 'not listed', not 'none left' — read them as zero and you invent thousands of out-of-stocks. We fix both first. A combined league table across retailers is a later job, not a Saturday one.

Reni le Roux — The Almond Girl, Founder

Replying to website requests about becoming a stockist, sending the price list and brochure, and replying to Meta ads where a customer wants to know about a specific product.

Build: A stockist page, and the reply that sends it

Needs: Your current price list and brochure; Your stockist terms — minimums, margins, lead times; Two or three enquiries you've answered well, so it sounds like you; Your logo and a couple of product photos

Watch: You'll finish before the rest of the room. Come find me — the same trick pointed at your Meta ad questions is a twenty-minute build.

Carla le Roux — Modern Muse, Founder

Difficult to say — I'd like to set up automatic bookings and invoicing for my new coaching website.

Build: Booking in, invoice out

Needs: The sessions you sell and what each one costs; An invoice you've sent recently — the real one, so we match your format; Your banking details as they appear on invoices; Your logo, and how you want to be paid — upfront, on the day, or after

Watch: The booking widget itself and taking card payments are sign-ups, not builds — an afternoon won't produce a payment gateway. What we automate is everything between the booking and the money, which is the part actually eating your evenings.

Maxime Davenport — Self employed, Project manager · creative producer · marketing manager

Tracking and logging data manually.

Build: A log that fills itself in

Needs: The thing you're currently logging by hand — the actual file, however rough; What you do with it once it's logged: invoice, report, status update?; Who sees the output, and how often they need it

Watch: Your brief is six words, so we'll spend the first two minutes narrowing it. Bring the file and it narrows itself.

Liezl Kruger — Cape of Storms Apothecary, R&D

Open to all tips, moving into a new business model and target audience.

Build: Your new positioning, on one page

Needs: Who the new audience is, as specifically as you can manage; What you're selling them that you weren't selling before; Anything you've already written about the new direction — rough is fine

Watch: Yours is the most open brief in the room, which makes it the easiest one to spend three hours exploring and leave empty-handed. We'll name the artefact early and hold you to it.

Danielle and Maxime use Claude daily; the other four are weekly. The briefing block matters more than the run sheet assumes — don't rush it to buy time elsewhere unless the last two seats sell.
